EDUCATION

Universidad Autónoma de Yucatán

Bachelor of Science in Engineering Physics

Mérida, Yucatán, MX

Aug. 2021 – May 2026

- Relevant Coursework:
 - * Numerical Methods, Probability and Statistics.
 - * Electives: Machine Learning, Data Science, Deep Learning for Computer Vision, Modern Cloud Engineering.

EXPERIENCE

Automation Engineer

WAYAKNA S.A. de C.V.

January 2026 – Present

Mérida, Yucatán, MX

- Design an ETL pipeline for a data migration process to a CRM software using Snowflake, Apache Airflow, and dbt
- Develop an API wrapper for various official government business registry APIs from different countries, in order to facilitate data enrichment and validation for a data processing system.
- Develop an invoice processing tool for text extraction using OCR libraries in Python to be integrated into an information validation process.
- Developed a web scraping script as part of a process to generate information (emails, phone numbers, etc.) on potential customers for the sales team, which successfully yielded more than 5,000 new leads from various sources.

Quality Assurance Specialist

Scale AI

February 2025 – January 2026

Remote

- Specializing in ensuring the quality and accuracy of AI models through rigorous validation and control processes. My work involves data review, performance analysis, and quality testing

TECHNICAL SKILLS

Languages: Python, SQL (Postgres)

Developer Tools: Git, Docker, Google Cloud Platform, Jupyter/Marimo Notebooks.

Libraries: polars, pandas, NumPy, Matplotlib, seaborn, scikit-learn, OpenCV, Pydantic, Apache Airflow, Prefect.

PROJECTS

Merida Coffee Shops Analysis — Personal Project | *Python*

- Designed and implemented a data ingestion pipeline in Python utilizing the Google Places API and geospatial grids to systematically collect information from all coffee shop places in the city.
- Performed data cleaning and anomaly detection to analyze business patterns based on location, pricing, and ratings.
- Developed interactive geospatial visualizations using Folium to map business density and performance metrics.

Air Quality Analysis — Research Project | *Python*

January 2025 – August 2025

Project: “Medición de la contaminación ambiental al interior de viviendas donde se cocina con leña y carbón en Pixyá, Yucatán”

- Developed Python scripts for automated data preprocessing, outlier detection, and time-series analysis of environmental pollution metrics using pandas and Matplotlib.
- Generated and presented statistical reports for the research team to facilitate data-driven insights into environmental dynamics.
